What is a Condom?

A condom is a health device in the form of a thin sheath made from latex (rubber).

Using a condom can prevent pregnancy by blocking sperm from entering the vagina so fertilization does not occur.

When used correctly and consistently, condoms are very effective in preventing both pregnancy and sexually transmitted infections (STIs) including HIV.

In addition, condoms are the only health device that are easy to carry, affordable, simple to use, and widely available.

3 Functions of Condoms

Condom as Contraception and Pregnancy Prevention

Worried about unplanned pregnancy?

Condoms prevent pregnancy by collecting ejaculatory fluid, preventing semen (which contains sperm) from entering the vagina and fertilizing the egg.

Condoms are 98% effective in preventing pregnancy when used correctly.

Condoms to Increase Intimacy for Couples

Want a better sexual experience?

Condoms offer a variety of features, shapes, scents, and textures that can enhance sexual pleasure.

Want to last longer? Want stronger sensations? Want it to feel like you're not using a condom?

All of these can be fulfilled with the various condom features available.

Condoms for Prevention of STIs (Sexually Transmitted Infections) & HIV

Want to stay safe from sexually transmitted infections?

A condom is the only health tool that is about 95% effective in preventing STIs (Sexually Transmitted Infections) and HIV.

Condoms help prevent the spread of infections by blocking contact of semen with infected mucosa/membranes during sexual activity.

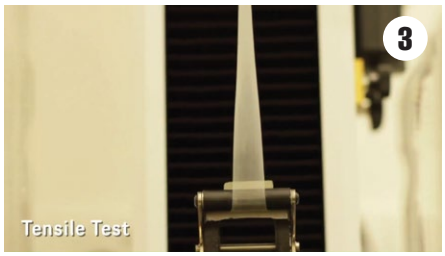

Use condoms correctly and consistently to prevent transmission of STIs and HIV.

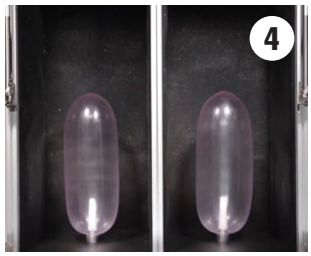

Our Commitment to High Quality

Our condoms have passed several testing stages.

Josh Condoms have passed international quality tests

Before Josh condoms reach you, they go through strict quality checks and meet international standards.

Each piece is precision-made, WHO certified, and produced in modern, eco-conscious facilities that follow global benchmarks.

Josh Condoms also complies with ISO 4074 standards and WHO specifications.

Each condom is 100% electronically tested and supported by continuous research and development.

Looking for quality that feels right? Level up your protection with Josh imported condoms.

Testing Process

1. 100% Electronic Testing to detect leaks.
2. Hang and Roll Test (using water) to check for leakage.
3. Pull Test to examine elasticity.
4. Air Inflation Test to check elasticity.
5. Thickness Test.
